

The Dragon Lake property is located 10 km from the Canol Road, approximately 85 km northeast of Ross River, Yukon. The project targets skarn/replacement gold mineralization associated with Tombstone-Suite intrusives and surrounding sediments. Soil geochemical sampling, limited trenching and drilling has been completed by Eagle Plains since 1996 and has indicated that significant gold mineralization is present within property boundaries.

DRAGON LAKE PROPERTY

Project Highlights

- Main Zone: Trenching and drilling of numerous geochemical soil anomalies on the property have resulted in delineation of a 600m x 400m auriferous skarn zone; results include:
 - 2010 chip sampling of T-11 returned 4.9 g/t Au, 1.1 g/t Ag and 0.1 %Cu over 6 m
 - Including 6.7 g/t Au over 4 m and 19 g/t Au over 1 m
 - 2010 sampling of T-12 returned 2.71 g/t Au, 1.6 g/t Ag and 0.13% Cu over 1.8 m
 - Including 3.28 g/t Au, 1.9 g/t Ag and 0.15% Cu over 1 m
 - T-02: 6.0m @ 2.8 g/t Au
 - T-09: 15.3m @ 1.2 g/t Au
 - D99-1 intersected 1.2m @ 2.1 g/t Au and 1.2m @ 3.7 g/t Au
 - 2010 grab sample of quartz vein in 1.2 m of 3.7 g/t Au interval returned 19.8 g/t Au
- Contact Zone: 0.52 g/t Au, 1.5 g/t Ag, 0.19% Cu over 1 m skarn
 - Grab sample of 1.74 g/t Au and 15.3 g/t Ag of quartz veining
- 2010 Exploration Pits over anomalous historic soil samples returned
 - 2.85 g/t Au, 5.9 g/t Ag in soil from base of Pit DR10P003 (1.4 m deep)
 - 2.25 g/t Au, 8.8 g/t Ag in soil from base of Pit DR10P005 (1.1 m deep)

Project History

1966: Staked by Kennco Explorations; completed geological and geophysical work
1983: Canamax Resources Inc. completed mapping and soil geochemical surveys
1988: Welcome North completed geological mapping and soils geochemical surveys
1996: Staked on behalf of EPL; completed chip sampling program
1997: EPL conducted geologic mapping, trenching and chip sampling
1999: Based on favorable results, EPL completed 4 diamond drill holes
2004: Aurora Geosciences completed 7 km IP / VLF geophysics survey
2005: Trenching program based on 2004 geophysical results
2009: EPL conducted minor soil geochemical program
2010: EPL conducted ground based rock and soil geochemical sampling as well as airborne geophysical survey

Eagle Plains Future Plans

Detailed geological mapping, soil geochemical sampling and ground based geophysical surveys to follow up 2010 program results to define diamond drilling targets for late 2011.

Geology

Mineralization on the property is associated with an elongate Tombstone Suite intrusive which has intruded siliciclastic / carbonate sedimentary rocks of the Hyland Group. Contact metamorphism related to intrusion of the pluton has resulted in a distinct alteration halo, including calc-silicate hornfels and pyrrhotite-pyroxene skarnification.
