

HIT (Au)

The **Hit property** is located in central Yukon Territory, 27 kilometers N.N.E. of MacMillan Pass, west of the Yukon/NWT border. The project targets skarn/replacement gold mineralization associated with Tombstone-Suite intrusives and surrounding sediments. Property highlights include intrusive-related gold mineralization which returned 7.85 g/t gold over 7.0 meters in trenches.

Main Zone – Hit Project

Eagle Plains in 1999 drilled two holes beneath the mineralized trench material but failed to intersect economic mineralization.
